

# enVision Enhancements

## PDA Soft Resets After Successful Sync/ Reset Database

To help maintain the integrity of the PDA / Memory when using enVision, the PDA will perform a soft reset once the user taps 'OK' in response to the sync successful message on the PDA.

## Invalid Date Message

The PDA logs the current time when the user is in enVision. If the time is altered, via various methods to a time earlier than that recorded in enVision, an error will be displayed to the user when signing into enVision asking the user to return the date and/or time back to the state prior to it being changed.

## Questionnaire Time Stamp Update

When beaconing out, the signature time will be applied to all sheets to indicate the last time the sheet was updated. Until the sheet has been signed it is not actually closed and can still be updated. This will alter some existing reports to reflect the last time the sheet was updated and not when the rep last updated the sheet.

## **Culling**

### Application Rounding

When a SKU is scanned the measurement will round up if it is 5 or more and be rounded down if it is 4 or less.

### Device Tab Added

A new tab page has been added which has the list of details as they were entered. Also, the SKU totals tab page now includes a tap-&-hold delete option for its entries.

### Bluetooth Scanner now Supported

The Socket Bluetooth Scanner is now fully supported within enVision.

### Actual Values Column

A new column has been added to the Details tab to show actual values and not length rounding.

# enVision Corrections

## Completed sheets being credited to another division

When a rep would switch divisions, the work done in the new division would show up in reports as being worked in the previous division. This issue has been resolved.

## Devices failing to register

Users can now register devices using the utilities menu at the bottom of enVision.

## Previous Call still on the PDA

Upon attempting to beacon into a store the rep would not be allowed to do so because the PDA was reporting that an open call existed. A process has been installed to remove the 'phantom open call' from the PDA eliminating the restriction to beacon in.

## **Culling**

### Incorrect SKU scan

The lookup of the UPC to SKU was returning the incorrect index to the SKU.
