PACE and PACE utilities have been replaced with Envision. To enter the software the user will now select Envision from the start menu.

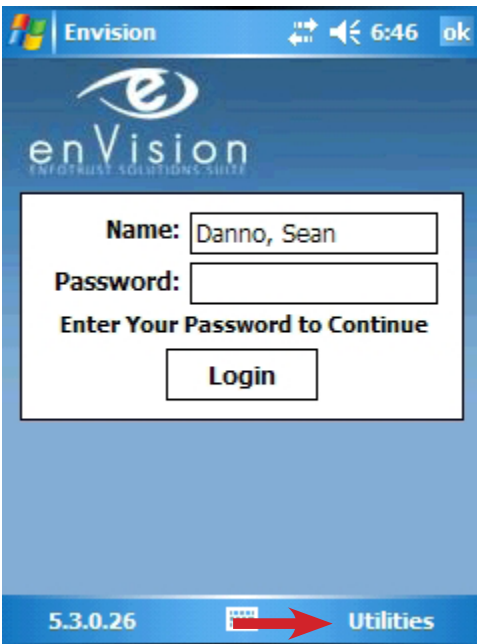

After selecting "Envision" from the start menu the user is presented with a welcome screen and a new background for the login screen.

The process of logging into the software has NOT changed.

All of the PACE Utilities functions are now incorporated into Envision. Once Envision is launched, the 'Utilities' tab reveals the Utilities functions.

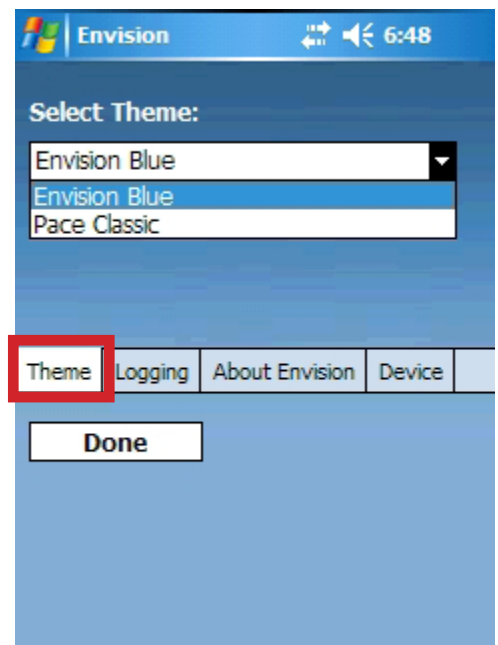

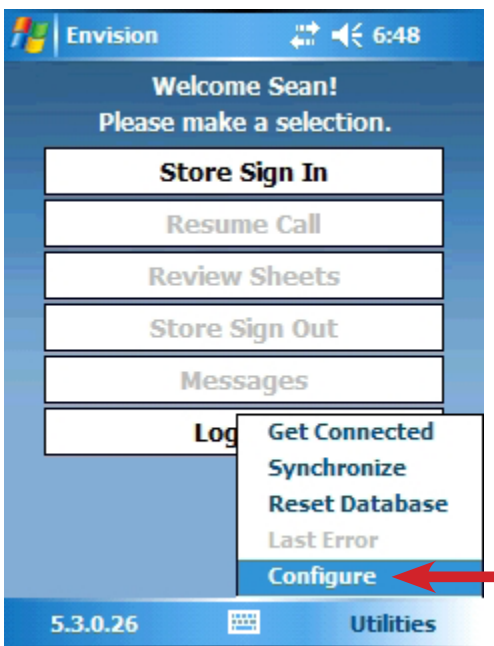

Do not expect a device reset as happens in PACE after a synchronization or database reset. With Envision, the device will not reset until the Rep logs out of Envision.

Last Error-If a rep experiences an error message, this feature remembers that error and will display the error when selected. This is a very useful tool in the troubleshooting process.

For windows mobile 5 devices a new 'configure' option on the main menu will allow the user to select a color scheme for enVision on their PDA. The choices are enVision blue and enVision classic. By default the color scheme is enVision blue. If enVision classic is selected the colors of the application will revert to the yellow and black scheme of PACE

Placekeeper - If a field rep is working in a sheet and for any reason is kicked out of Envision or the PDA otherwise malfunctions, Envision will automatically re-launch without the user having to re-enter their password. The user will be brought back to either the Main menu, Resume Call, Review Sheets, or directly to the questionnaire the rep was working on.

With Envision, the clock on the Reps PDA will NOT change to the beacon time when the beacon is used. Your calendar and appointments will no longer be affected when the beacon is used.
